PREFACE

This special summary report provides the results of a search for evidence of camouflaged or dummy aircraft at 22 selected airfields below the 28th parallel in China, and covers missions from [redacted]

25X1D

25X1D

[redacted] Only those airfields which reveal an air order of battle at least once during the reporting period are included in this report.

Each airfield has been assigned a report format sequence based on a combination of the number of the World Aeronautical Chart (WAC) on which it appears and the National Photographic Interpretation Center (PIC) target number for the installation. For example, the WAC number for the Lei-pai Airfield is 0615; the PIC number is 17. Therefore the WAC-PIC number for Lei-pai Airfield is 0615-17.

The 22 airfields in this report have been arranged by WAC-PIC number in ascending order, and numbered one through 22 accordingly. Using this sequence a locator map fixes the location of each airfield, and a facing key provides the name and coordinates.

The summary report on each airfield provides an overall description of the installation and the date and the number of the mission used for the description. The Comor Target Number follows.

A positive or negative statement as to evidence of camouflaged or dummy aircraft follows the description.

The next entries provide a mission by mission aircraft count, utilizing the latest photography available to the NPIC going back through [redacted] The date of the photography, the actual aircraft count, the mission number, and the photo frame references comprise this write-up.

25X1D

The last item in the summary write-up lists the missions which revealed no air order of battle, as appropriate. Missions on which the airfield could only be identified, and the limiting conditions causing this, may also be indicated.

An appendix explaining column headings, photo reference data, Comor Target Numbers, and abbreviations for limiting conditions concludes the report.

- APPENDIX

COLUMN HEADINGS

City, Installation--This column contains the name of the city or town nearest the installation, followed by the name of the installation. If the name of the installation is not known, it is titled according to its function. Where appropriate, the city and installation names are followed by a capsule description.

Coordinates--Coordinates are referenced to the SW corner of the minute square. When the subject installation covers a wide area, coordinates are given for the approximate center of the installation.

WAC--This column provides the World Aeronautical Chart number for that area in which the subject installation is situated.

Installation Numbers--This column is divided into two subcolumns. The first subcolumn lists, when known, the BE installation number assigned to the installation. The second subcolumn lists the installation number assigned by NPIC. Installation numbers, when used to reference an item, should be prefixed by the appropriate WAC number, since installation numbers are repeated from WAC to WAC. For example, there is an NPIC target number 0468-15-A

and an NPIC target number 0467-15-A. In each instance, the NPIC installation number is 15-A, but the installations appear on different WAC charts.

COMOR TARGET NUMBERS

Target numbers assigned by the Committee on Overhead Reconnaissance (COMOR), when available, are listed directly above the photo reference data.

PHOTO REFERENCE DATA

The photo reference data indicates the frame(s) on which the installation appears.

CONDITIONS AFFECTING PHOTOGRAPHY

Following the photo reference data, symbols indicate conditions which affect the appearance of the installation on the photography. The symbols are: C (clear); SC (scattered cloud cover); HC (heavy cloud cover); SC-HC (scattered-to-heavy cloud cover); H (haze); CS (cloud shadow); SD (semidarkness); S (snow); O (obliquity); and PQ (poor image quality).
